Nague Nkenfack Ivane Maeva

Data / Business Analyst Internship

Pisa, Italy (+39) 351 686 7946 naguemaeva26@gmail.com

linkedin.com/in/ivane-nague-nkenfack github.com/Ivanemaeva ivanemaeva.github.io

Skills

Programming: Python, SQL, R
Data & ML: pandas, scikit-learn, XGBoost, SHAP, LIME, matplotlib, Jupyter
Tools: FastAPI, Streamlit, Git, GitHub, Excel
Languages: French (native), English (native), Italian (C1)
Certificates: HackoWatt 2026 (WattWise Home), IBM Bob 2.0 Hackathon – lablab.ai (participant)
Interests: Formula 1, motorsport and football, reading (personal development), anime, films and series

Education

University of Pisa Pisa, Italy
MSc in Data Science and Business Informatics *Nov 2025 – Present*

- Courses: Data Mining, Statistics, Optimization, Databases, Text Analytics, Distributed Data Mining

University of Pisa Pisa, Italy
BSc in Business Administration – Management and Control *Nov 2022 – Nov 2025*

- Courses: Management Control, Accounting, Corporate Finance, Business Strategy, Statistics
- Thesis: *Retirement Savings and Behavioral Economics: Evaluating the Effectiveness of Automatic Enrollment Policies*

Hackathon Projects

Rhythm | *Amazon Build, Ship, Shape Hackathon – Ring track* | *Python, FastAPI, SQLite, Ring API* Oct 2026

- Built a morning check-in system for relatives who live alone: it learns the daily routine from Ring motion metadata (no video) and sends one email if the day starts later than usual
- Set alert times from the 95th percentile of 8 weeks of morning activity, separately for weekdays and weekends
- Tested on 60 simulated households over 16 weeks: **0 false alerts** per month and **60/60** silent days detected

PreFlight | *IBM Bob 2.0 Hackathon – solo, 48 hours* | *Python, FastAPI, GitPython* Sep 2026

- Built a release risk auditor that compares two git versions and creates a readiness report: risk score, risky changes, test coverage gaps, config mismatches and rollback plan
- Analyzed code changes with Python AST, wrote **121** automated tests and deployed a live demo with a web dashboard

WattWise Home | *HackoWatt Hackathon – team of 2* | *Python, Streamlit* Sep 2026

- Built an energy app that forecasts household consumption, finds peaks and checks if solar panels pay off, using real data from 17 homes (**189,078** hourly rows) enriched with ERA5 weather data
- Split the work through a shared data format: my teammate built the forecasting backend, I developed the Streamlit app (structure, charts, controls) and deployed it online

Academic Projects

Problematic Internet Use Prediction | *Data Mining 2 – team of 3* | *Python, XGBoost* Feb 2026 – Jun 2026

- Combined questionnaire data and wearable sensor time series to predict problematic internet use
- Applied outlier detection, imbalanced classification and shapelet-based time series classification (**71%** accuracy)
- Explained XGBoost and Random Forest predictions with LIME and SHAP

Board Games Data Mining | *Data Mining 1 – team of 3* | *Python, scikit-learn* Sep 2025 – Dec 2025

- Built a full data mining pipeline: K-Means, DBSCAN and hierarchical clustering (silhouette **0.579**), decision tree (**70.9%** accuracy), KNN, Naive Bayes and association rules (lift above **7**)

Ranked-Preference Data Analysis | *Statistics for Data Science – team of 3* | *R* May 2026 – Jun 2026

- Re-implemented a published paper in R: Plackett-Luce model (MLE), multidimensional scaling, chi-squared and Fisher tests

Sales and Production Budget | *Management Control – team of 4* | *Excel* Apr 2025 – Jun 2025

- Built a full-year budget model for a footwear company: sales forecasts by product line, linked production budget
